REGULARITY SECTION A

The following table of distances, tulip diagrams and instructions gives sufficient information to find your way without even using a map, although you may find it helpful to use the map to keep a check on where you are. Speed Change points are noted in the table and the times in the Time column take account of the changes.

Not all road junctions that you come to are given in the table. You should stay on the road you are on unless instructed to turn off. Never fork, turn, or even go straight on into a road which has a give way line across its entrance unless there is a tulip instruction which tells you to. The distances given in the table will assist you in identifying the junctions given in the table.

PLEASE NOTE that unlike Jogularity sections, the timing points (IRTCs) may be anywhere along the defined route, not necessarily at one of the points identified below.
